© GespageLexmark 6.3.0.0

The "**eTerminal-Lexmark**" embedded terminal works with LEXMARK Multifunctions and allows dialogue between the MFP and the **GESPAGE** server. The management and configuration of the terminal are done from a user-friendly web interface.

This embedded terminal enables secure printing thanks to user identification by entering a code on the touch screen or swiping a card.

The **eTerminal-Lexmark** makes the use of the MFP easier, ergonomic and above all more productive in use. With a single click, the user interacts with the documents he wishes to copy, print or scan, while respecting confidentiality and GDPR regulations.
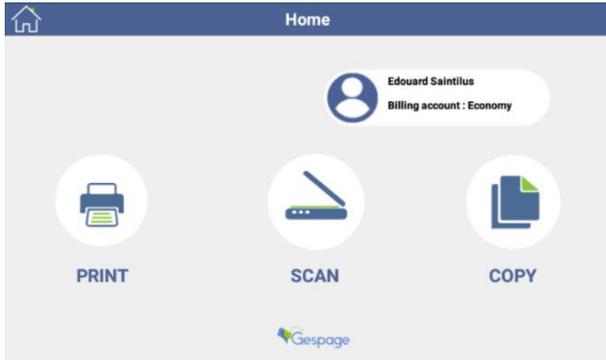

## Scheme of a network configuration

# Embedded terminal benefits

- **Security / Access management**

✓ Secure use of the LEXMARK MFP by login, login/ password, code, card (badge reader in option).
✓ Setting of access rights for the specific use to each user or user group.
